KOKETSO RAMOGALE

I’m a versatile visual communicator with a brand rooted in nostalgia, fun, and confidence, specializing in graphic design, videography and photography. Inspired by the vibrant cartoons of the 2000s and my passion for the South African music industry, my creations radiate joy, nostalgia, and imagination.

I employ bold and warm colors, especially shades of orange, coupled with expressive strokes and captivating sans-serif fonts. My ultimate ambition is to leave a lasting mark on the South African music industry through my unique creative vision.

SALUTE
HEALTH BRAND

Ci Manual

20 in the 60s and 60 in the 20s Salute is a revolutionary South African health, food, and beauty brand tailored for those who have travelled through the years. At Salute, we passionately embrace the concept that age is a state of mind by bringing back the vitality and cheerfulness of a younger you, we defy the limitations often associated with growing older.

01.

CI-Manual

LOGO

Inspired by Jhon Lennons 60s Sunglasses our logo helps remind our consumers of the happy moments that they had in their younger years with the music and events of this era to further bring that energy into their older years.

HIDDEN LAYER MAGAZINE

Editorial Design

Inspired by the idea of transparent layers in Photoshop. “Hidden Layer,” is a graphic design publication aimed at uncovering graphic design gems for the visual communication students at Ctu Training Solutions. Hidden Layer provides easy access to lesser-known aspects of graphic design while highlighting student’s work. The magazine is the great guide to discovering valuable resources and information.

1

Five names every graphic designer should know

- Rob Carney

If you're embarking on a career in graphic design or just interested in creating some great layouts there are some designers that you simply must know about. These are the designers that have changed the way graphic design is seen in the contemporary world.

Chip Kidd

Chip Kidd is best known for his stunning book jackets Based in New York, Chip Kidd is best known for his stunning book jackets – most notably for seminal publishing house Alfred A. Knopf. Kidd has worked for writers such James Elroy, Micheal Crichton and Neil Gaiman (amongst many others).

Jurassic Park is one of his most notable book covers, and in his 2005 monograph he explained the thinking behind it: "When trying to recreate one of these creatures, all anyone has to go on is bones, right? So that was the starting point... Not only was the drawing integrated into the movie poster, it became the logo in the film for the park itself. I think it's safe to say that the Jurassic Park T-Rex became one of the most recognisable logos of the 1990s."

Rob Janoff

Why do you need to know about Rob Janoff? Simple: he designed the Apple logo. Janoff masterminded possibly the most famous mark in the world today while at ad agency Regis McKenna back in 1977. And although it's been tweaked, the basic form has remained the same ever since a testament to its simplicity and longevity (and it was created in only two weeks). Back in 2013, Janoff told us that the idea of an apple with a bike taken out of it was "really a no-brainer". He continued: "If you have a computer named after a piece of fruit, maybe the image should look like the fruit? So I sat for a couple of weeks and drew silhouettes of apples. "Bite is also a computer term. Wow, that was a happy accident. At that point I thought 'this is going to have a wink and a nod with it, and give it personality'."

An apple with a bite (or byte?) taken out of it was a 'no brainer'. And as for the now forgotten coloured stripes? "The big deal about the Apple II was that it was the only computer that reproduced colour images on the monitor, and it was the only computer that you could plug into your home colour TV. Also, a lot of it had to do with the aesthetic origins of both Steve [Jobs] and I, which was a kind of hippy aesthetic and The Beatles and Yellow Submarine."

Peter Saville

Peter Saville is best-known for his record sleeve designs for Factory Records artists – think Joy Division and New Order (Unknown Pleasures, Transmission, Blue Monday and more). But his sleeve work spans five decades – Saville is one of the most prolific record designers of all time; if not the most prolific. But the Manchester-born designer's work doesn't stop at sleeve design. In 2004 he became creative director of the City of Manchester; has worked with fashion's elite including Jil Sander and Stella McCartney; and in 2010 he designed the England football home kit. In 2013 he told The Guardian all about the latter: "The red and white thing has been entirely marginalised by one kind of person. It's synonymous with an attitude that is naive, xenophobic, bullying and self marginalising. I thought, that's not reflective of the team, or football, or of the nation at all. But it turns out the market for those shirts are those bloody-minded xenophobic individuals with the shaved heads. When it came out, they did not like it. They did not like it at all."

Michael Bierut

Designer and educator Michael Bierut has been a Pentagram partner for 27 years now. There aren't many more design agencies that are more respected than Pentagram – and becoming a partner is one of the ultimate design accolades. Bierut has has won hundreds of design awards (he's also got permanent work in MoMA). Before Pentagram, Bierut worked for 10 years at Vignelli Associates. The designer's projects at Pentagram include identity and branding for Benetton, the New York Jets, Walt Disney and design work on Billboard magazine. This is of course, just a small slice of his sprawling portfolio. Bierut is also a senior critic in graphic design at the Yale School of Art. In 2013, we caught up with him to find out what he looks for in new talent: "The best are people who are bright and articulate, and have great work in their portfolio. I could sit with them all day," he says. "The second best have great work but can't talk about it intelligently. That takes work, but still it's worth the effort.

"I like people who, in talking about their work, scratch below the surface. Don't talk about typefaces and Photoshop effects; talk about the subject matter, and how that interested and inspired you."

Massimo Vignelli

Vignelli was one of the great designers of the 20th centuryMassimo Vignelli died in 2014, taking with him a legacy of some of the most iconic design work of the past 50 years. Counting IBM, Ford, Bloomingdale's (his 'Brown Bag' designs are still in use today), Saks, American Airlines and many more as clients, and counting Micheal Bierut amongst his protégés, Vignelli's legacy lives on perhaps most prominently in the subway map and signage he designed for New York City in 1972.

2

The Role of Textures in Contemporary Graphic Design

-Veronika Theodor

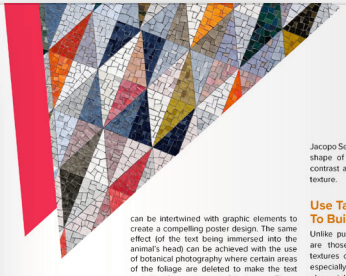
3

Texture is a powerful technique for creating compelling and life like design projects, and mastering it will vastly improve your designs. Ever dreamt of having the skill and knowledge required to produce living, breathing designs?

Texture is the surface quality or feel of an object. The way your skin rubs against the rough fabric of your wool blanket, the warm sensation of the soapy bubbles covering your skin in the bath or the gentle touch of your hair falling down your shoulders. In graphic design, texture is generally only a visual thing, but it creates a physical illusion and it continues to play a leading role in the creation of all types of visual elements. In this article, we'll walk you through different ways that texture can be incorporated into your own designs.

Use Natural Textures to Bring Organic Life to Your Designs

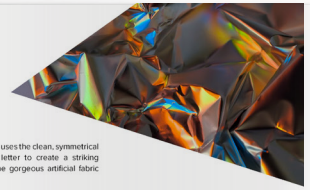
The first trick on our list is to incorporate natural textures into your designs. Natural texture imagery comprises things like the crisp look of fresh grass or the gentle touch of a small feather and inspiration can be taken from every corner of our world.Implementing natural elements into design infuses it with life, bringing vividness, warmth and beauty to the result. Keith Barney has created a brilliant example of how nature's texture can be intertwined with graphic elements to create a compelling poster design. The same effect (of the text being immersed into the animal's head) can be achieved with the use of botanical photography where certain areas of the foliage are deleted to make the text look like it's popping out of the leaves. These immersion techniques work to bring life to your designs.



Create Experimental Designs By Using Unique Artificial Textures

Artificial textures, unlike natural textures, comprise a wide array of imagery with surrealistic patterns and human-fabricated objects. Artificial texture graphics include a broad spectrum of elements created by photography, three-dimensional design and manufacturing. Washed-out textile, wall surfaces and artificial geodes along with simple line art can all create an endless selection of texture images that can form a focal point in any graphic composition. Designers can add a broad range of artificial textures to their designs.

Jacopo Severitano uses the clean, symmetrical shape of the "A" letter to create a striking contrast against the gorgeous artificial fabric texture.



Use Tactile Texture To Build Visual Interest

Unlike purely visual textures, tactile textures are those with a physical quality. Tactile textures come with a wide variety of uses, especially in print art where the paper type, glossy ink layers and matte surfaces attract the viewers' attention and transforms it into a physical interest towards the design.

While tactile texture describes the physical surface of objects, it can be successfully transferred into graphic design to create a certain feel. Tactile texture is a common design element in stationery design and magazines where the main intention of the design is to create a memorable item that influences the user and creates a bond between the visual and physical qualities of the object.

Pierre Mendel presents a great example of layered tactile textures used in graphic design and proves they can be applied to graphic design in many ways. Besides using different ink types as well as gold, matte and gloss foils in magazine print designs, you can also layer different design elements to attract the viewer's attention to particular areas of the design.

Create Immersive Graphic Design with Textured Graphics

4

Textured graphics and backgrounds can be used in your designs in a way that gives them the effect that they are truly immersed. Immersing visual texture into your design features brings depth and detail to your art.

Fabian De Lange' s exquisite poster design is a gorgeous example of immersive texture interlaced with graphic elements. The "Mumbai" art project represents a beautiful composition of 3D leafs and textile which intertwine with the surrounding minimalist graphics to create an immersive design.

Going 3D at CTU

-Steyn Pretorius

First year Visual Communication students needed to develop characters for a new animated feature, Gongats. The process included the development and design of a character in two different states that culminated in a three-dimensional clay sculptures.

5

The project brief stated that a tribe of congats have been living peacefully for many centuries. Their world however is about to change as human development threatens their blissful existence. The protagonist is a Gongat named Frank. Together with some of his friends he embarks on a journey to attempt to prevent the humans from invading what they hold dear.

Gongats are predominantly subterranean creatures who spend most of their lives in elaborate and skilfully crafted burrows. They only venture to the surface for certain rituals such as star catharsis, moon consumption and blossom sniffing. Unlike other subterranean creatures they do not have diminished eyesight, in fact their eyes are brilliantly adapted for underground as well as surface conditions. Gongats are vegetarian and live predominantly from roots. Owing to the depths of their burrows they sometimes have to negotiate subterranean water sources. Gongats are highly intelligent creatures with a strong need for social bonding. They are placid in character and extremely loveable. They do however possess a very peculiar trait in that they are unable to keep their emotions hidden. Any emotional fluxuation will manifest in a change of physical appearance.In groups of two, students were to develop and design the character of Frank. The following are extracts from the students' rationales were presented with the final art work.

Gerrie Grobler and Danielle Steele

Frank is an outcast of the Gongat who was never accepted by the rest of the clan owing to the fact that he lost one of his horns. Horns represented power and without his horns he was seen as a useless Gongat. Amidst the negative comments and sneers from his peers, Frank stays positive and always seeks out adventure.

The main goal of Frank was to find his horns or alternatively to find a way to be accepted by the Gongat clan. Frank go on a quest to find his missing horn. One of his special abilities is to control and compel nature in a way that he wants. He is further able to dig holes in a short space of time using all four of his arms. Frank possesses enormous strength and can pick up to ten times his own weight. His emotional state will change rapidly when he sees something that upsets him.

The change in emotive states manifests in physical changes to his body. He adapts to the nature and have a way to compete with animals making him a true creature of nature.

MandieStrydom and Natanya Jansen

Ms Frankie is an underworld creature. She has a lot of features that helps her with her everyday life. She spent most of her life in a small forest Now that she reached adulthood, she started to explore beyond the barriers of her known habitat. She only goes on these expeditions once a month when the moon is at it brightest. When she leaves the underground world her eyes adjust to the light of the bright moon. Under the ground her eyesight is enhanced with night vision. She is very fast and has great swimming abilities. Her skin and jacket color are both green which helps with camouflage or when she finds herself in dangerous situations. She lives from the tree roots that enters her home as well as from sea grasses that grows in the dark water tunnels.

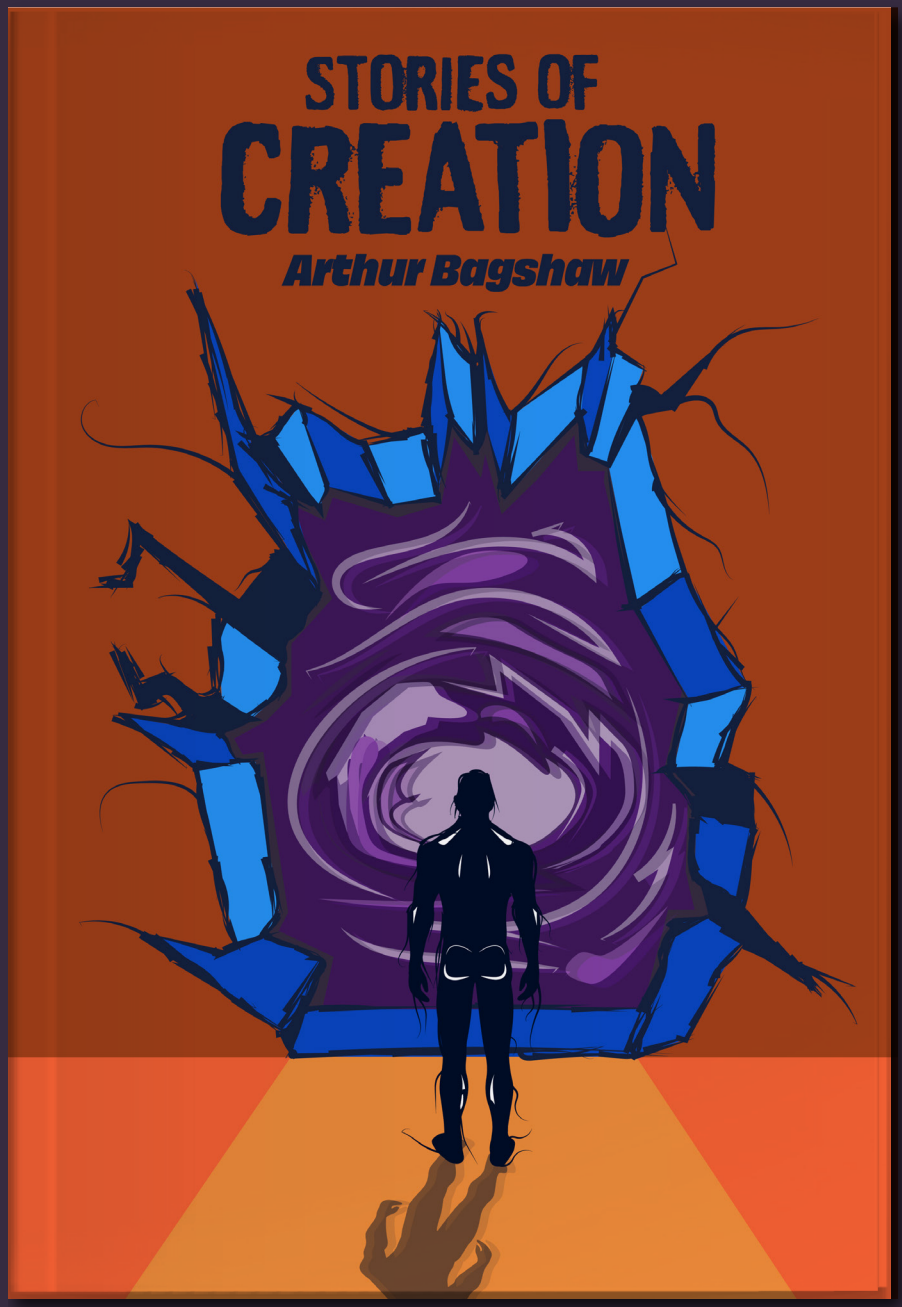
She has a very friendly personality and whenever she sees another creature she tries to interact with them and make friends. Any emotional fluxuation will manifest in a change in her physical appearance.

6

STORIES OF CREATION
STORY BOOK

Editorial

Stories of Creation” by Tafelberg Publishers is a fascinating book filled with ancient myths about how the world came to be. These captivating stories inclusive of a number of cultures, suggest that creation emerged from chaos and destruction, emphasizing how the act of creating something new is inherently transformative. The book explores the idea that our planet was shaped from formless chaos by an external force, which brought energy into existence. It delves into the concept that before something new is created, there is often destruction, hinting at the presence of a higher power guiding this incredible process.



Editorial

The first writer to record the myth of Pangu was Xu Zheng during the Three Kingdoms period. Recently his name was found in a tomb dated 194 AD.

In the beginning there was nothing in the universe except a formless chaos. This chaos coalesced into a cosmic egg for about 18,000 years. Within it, the perfectly opposed principles of Yin and Yang became balanced, and Pangu emerged (or woke up) from the egg. Pangu is usually depicted as a primitive, hairy giant who has horns on his head and wears furs. Pangu began creating the world: he separated Yin from Yang with a swing of his giant axe, creating the Earth (murky Yin) and the Sky (clear Yang). To keep them separated, Pangu stood between them and pushed up the Sky. With each day the sky grew ten feet (3 meters) higher, the Earth ten feet thicker, and Pangu ten feet taller. In some versions of the story, Pangu is aided in this task by the four most prominent beasts, namely the Turtle, the Qilin, the Phoenix, and the Dragon.

Väinämöinen is described as the god of chants, songs and poetry. In many stories Väinämöinen was the central figure at the birth of the world. The Finnish national epic, Kalevala tells of his birth in the creation story in its opening sections. This myth displays elements of creation from chaos and from a cosmic egg, as well as earth diver creation.

At first there were only primal waters and Sky. But Sky also had a daughter named Ilmatar. One day, seeking a resting place, Ilmatar descended to the waters. There she swam and floated for 700 years until she noticed a beautiful bird also searching for a resting place. Ilmatar raised her knee towards the bird so it could land, which it did. The bird then laid six eggs made of gold and one made of iron. As the bird incubated her eggs Ilmatar's knee grew warmer and warmer until finally she was burned by the heat and reacted by jerking her leg. This motion dislodged the eggs, which then fell and shattered in the waters. Land was formed from the lower part of one of the eggshells while sky formed from the top. The egg whites turned into the moon and stars, and the yolk became the sun.

OYIBMABA PRODUCTION

Ci Manual

Many people living in rural areas are often overlooked and don't have the chance to reach their full potential. We may think of the overlooked people as diamonds in the rough. Oyibamba, is an NGO, that aims to change this by bringing the theatre to these remote places. Our main goal is to uplift these 'rough diamonds' by making the unseen seen. Through theatre, Oyibamba empowers these individuals, allowing them to gain knowledge and influence.

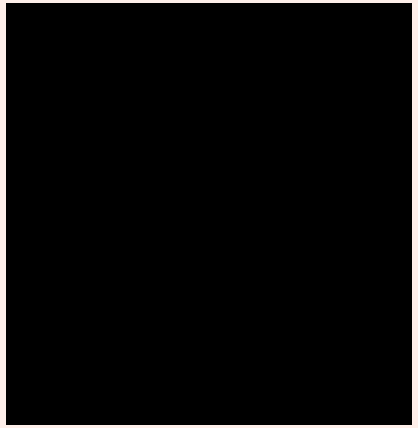
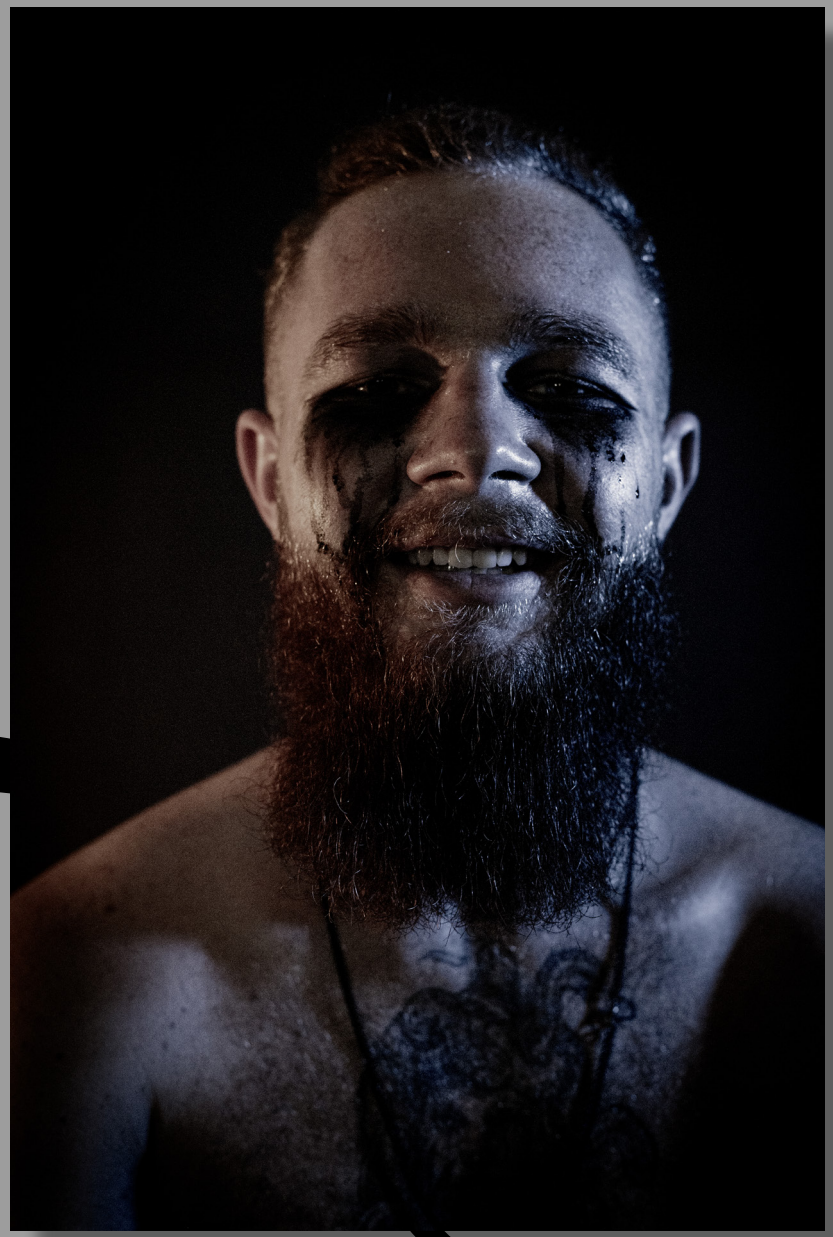
CONCEPTUAL PHOTOGRAPHY

People with the biggest smiles often carry the deepest scars. Sometimes, we hide our feelings of depression behind our laughter, portraying happiness even when we're hurting inside. This concept is depicted in the following photographs.





Photography

THANK YOU FOR WATCHING
